Please amend the application as follows:

IN THE DRAWINGS

Please replace FIGs. 10A and 10B with the enclosed figures, which have been amended to include the legend - PRIOR ART --, which is shown in red. No new matter has been added.

IN THE CLAIMS

Please add the following new claim:

20. (New) An active-matrix liquid crystal display apparatus comprising:

an active-matrix substrate including a plurality of scanning electrode lines, a plurality of data electrode lines, pixel electrodes and switching elements, the pixel electrodes being respectively connected to intersections of the plurality of scanning electrode lines and the plurality of data electrode lines via the switching elements;

a counter electrode substrate including a counter electrode formed thereon, the counter electrode being opposed to the pixel electrodes;

a liquid crystal sandwiched between the active-matrix substrate and the counter electrode substrate;

the active-matrix substrate further including supplementary capacitance lines that are formed in parallel to the scanning electrode lines, and supplementary capacitances for holding display data that are connected between the pixel electrodes and the supplementary capacitance lines,

the apparatus further comprising:

a supplementary capacitance drive circuit for driving the supplementary capacitance lines so that a predetermined potential difference from a voltage applied to the counter electrode is always maintained when any of the pixel electrodes and supplementary capacitance lines leak,
